

The **Carbon Cub FX-3** builds on the success of our CarbonCub SS. This new aircraft flies faster and farther while hauling more cargo. FX-3 includes a more powerful engine, constant speed prop and redesigned ailerons and flaps. A **Premium Equipment Package** specifically suited for off airport operations is also included. The **Carbon Cub FX-3** fulfills the most challenging missions.

HOW IT WORKS... The builder visits CubCrafters facility in Yakima, Washington twice:

FIRST VISIT

Five days are spent working with our factory technicians constructing your parts and components. Steel, aluminum and composite aircraft components for your specific aircraft will be fabricated and assembled.

SECOND VISIT

After the first build session, the builder returns for his/her second visit for two days to put the finishing touches on the aircraft and get it certified.

During the **Carbon Cub FX Builder Assist** process, the aircraft builder will be accompanied by a **Factory Concierge**. CubCrafters' fabrication and assembly stations will be devoted entirely to the builder during their sessions. CubCrafters provides lodging during the required build sessions. Lunch will be provided each working day and a courtesy car is available for use during the builder's stay.
