

The **Carbon Cub FX** is the newest and best aircraft from CubCrafters. Building on the success of the high-strength, lightweight airframe and powerful engine of the Light Sport **Carbon Cub SS**, the **Carbon Cub FX** flies faster, flies farther, and hauls more cargo than ever before. Redesigned ailerons and flaps, along with a **Premium Equipment Package** specifically suited for off airport operations, are included with every new **Carbon Cub FX**. With the flexibility to certify in the E-AB category at up to 1,865 lbs gross weight, the **Carbon Cub FX** fulfills the most challenging missions.

HOW IT WORKS... The builder visits CubCrafters facility in Yakima, Washington twice:

FIRST VISIT

Five days are spent working with our factory technicians constructing your parts and components. Steel, aluminum and composite aircraft components for your specific aircraft will be fabricated and assembled.

SECOND VISIT

Approximately 50 days after the first build session, the builder returns for his/her second visit for two days to put the finishing touches on the aircraft and get it certified.

During the **Carbon Cub FX Builder Assist** process, the aircraft builder will be accompanied by a **Factory Concierge**. CubCrafters' fabrication and assembly stations will be devoted entirely to the builder during their sessions. CubCrafters provides lodging during the required build sessions. Lunch will be provided each working day and a courtesy car is available for use during the builder's stay.

AS OUR TOP-OF-THE-LINE AIRCRAFT, CARBON CUB FX PREMIUM EQUIPMENT PACKAGE INCLUDES

- CC340 Engine (180 HP)
- G-Series Flaps & Ailerons
