

EFFECTIVE DATE: This NOTIFICATION is effective **May 19, 2023**

SUBJECT: Oil Filter Defect

APPLICABLE MODELS: CC11-100 Aircraft

COMPLIANCE TIME: As Required

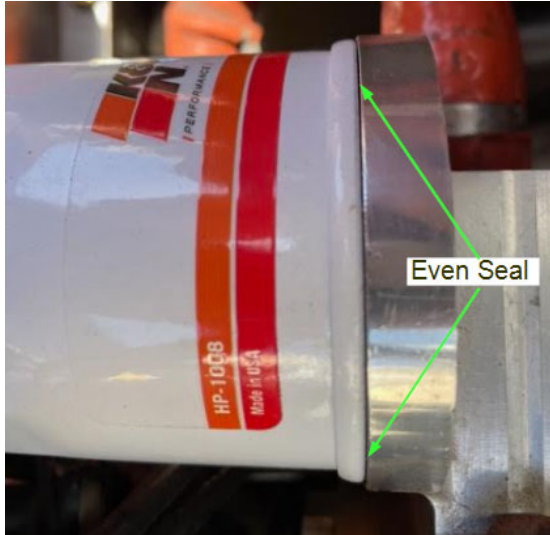

PURPOSE: Cub Crafters has been made aware of a single installation where the threads of the oil filter were not normal to the sealing face. This defect from the manufacturer can result in an uneven and unreliable seal. This notification is to inform owners of the potential issue and provide instructions to verify a proper installation on their aircraft.

INSTRUCTIONS:

1. Remove upper cowl to verify if an oil filter is installed, as not all CC11-100's are equipped with this filter. It will be located on the aft side of the engine on the left side.

2. If you have no oil filter here, then this notification is not applicable to your aircraft and the upper cowl may be reinstalled.
3. If you do have an oil filter here, inspect the interface between the filter and filter adapter. The interface should be consistent and even around the entire perimeter.

4. If the perimeter does not have an even seal, your oil filter must be replaced with a new SP56002-002 filter before next flight. You can order a replacement filter [online](#), or contact the Cub Crafters store.
